To section V:

With regard to claim 1 the document JP-A-2001 309 253 (hereinafter referred to as D1; discloses a method of channel changes in television. The method includes monitoring channel change commands during which channels are discarded (by setting a lock ID in table 302) During a zapping command, discarded channels are identified and skipped during the following zapping session. Hence, all features of claim 1 are known from D1.

In addition to the above features the method of claim 1 monitors a time for which the viewer viewed the channel and on the basis of this, determines whether the channel is discarded. The effect achieved by this feature is to include the actual viewing habits of a viewer for deciding whether or not a channel is discarded. D1 only takes into account predetermined user settings and the content of the received channels actually received. There is no hint to monitoring the actual viewing time in the available prior art.

The above observations hold in a similar manner for claims 19 and 34.

The dependent claims relate to preferred embodiments of the invention.

Hence, all claims meet the requirement of Article 33(2)-(4) PCT.
